

ARCHITECTURAL METALS

>Interior

CARVART delivers interior architectural metals as a fully integrated system—spanning precision steel and mixed-material doors, modular and custom cladding, partition screens, railings, and bespoke trims—engineered to work together as a cohesive architectural language. From slim-profile glass and metal door systems to large-scale feature walls and finely detailed ornamental accents, each element is developed through a design-assist process that aligns materiality, detailing, and performance. Capabilities include custom-fabricated panels, mesh and perforated screens, glass-metal hybrids, and structural railing systems, all supported by advanced finish expertise across stainless steel, aluminum, brass, and specialty alloys, with brushed, polished, patinated, PVD, anodized, and powder-coated options. CARVART’s ability to match finishes across systems ensures visual continuity, while prefabricated assemblies, concealed mounting strategies, and precision engineering enable efficient installation and uncompromising execution—bringing complex architectural metal concepts to life with clarity, consistency, and craft.

CARVART offers a fully integrated collection of architectural accessories and hardware designed to create visual continuity throughout environments. For interior designers seeking cohesion at every detail, our custom capabilities allow each element to align seamlessly in proportion, profile, and finish—from statement door pulls and sculpted grab bars to refined towel bars, shelving systems, light covers and beyond.

> Staircases

Staircases

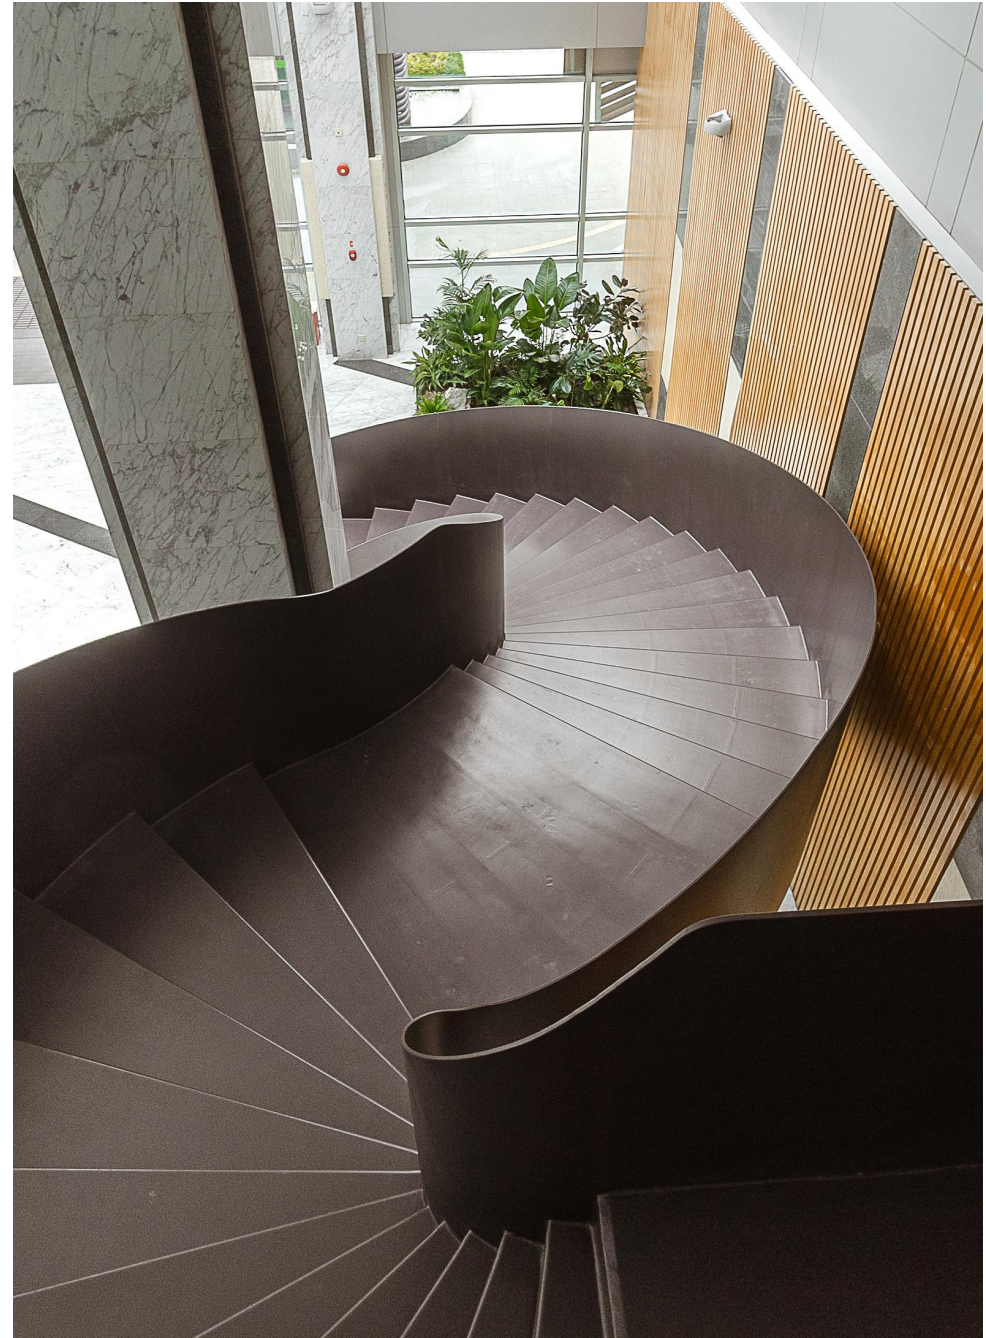

CARVART delivers spiral staircases as fully engineered, prefabricated systems—merging architectural expression with structural precision. Each stair is custom-designed and digitally coordinated, then fabricated as a controlled assembly to ensure exact geometry, finish consistency, and seamless integration with surrounding materials.

Structurally Optimized

By leveraging a modular, pre-fit approach, CARVART minimizes site complexity, accelerates installation, and achieves a refined, sculptural result that would be difficult to execute through traditional field-built methods.

Case Study: Hardrock Hotel NYC Roulette Ceiling

This highlights CARVART's role in delivering high-quality finishes, efficient installations, and sustainable pre-fabricated solutions. The scope of work included the design and installation of key architectural elements. The project required innovative solutions to integrate high-impact design with practical functionality, managing both the aesthetic expectations and the logistic realities of a major urban construction site.
